

shipped to your door ready for service

Package Systems

The Acterra Group's Manufacturing Division can build you a customized tank application to fit your fueling needs. These systems are manufactured at our Iowa based factory and shipped directly to your location. Simply plug in the system and it is ready for use.

Systems for all applications

"Plug and play" fueling systems

Our systems are constructed under Steel Tank Institute (STI) and Underwriters Laboratory (UL) fabrication standards. Tanks can be single-wall or doublewall construction. We also offer fire rated systems utilizing Fireguard® and Flameshield® technology. Other customer fabrication options are available including stainless steel, attached pump shelving, and fill boxes.

Dispensing & Equipment Options

Whether you need high speed fueling, an intermittent pump, or a heavy duty fleet dispenser, an Acterra package system will fit your needs. All of our systems come fully plumbed with the right type of dispensing equipment for your needs including hoses and nozzles. If you are not sure what type of system to buy, an Acterra sales professional can make the equipment recommendations to fit your organizations needs.

Our package systems will include the appropriate venting needed for use along with gauges and alarms to manage filling and fuel storage. Also, the system can be prewired at the factory by our trained electricians so start-up is easy and uncomplicated. Other optional equipment may include card reader systems for fuel reconciliation and management. This equipment can be mounted on the tank system or mounted separately to fit your space requirements.
