Alternative Fuels

Dispensing & Storage

Acterra provides turn-key construction and installation of blender dispensers and the construction of bulk storage systems. Our team can design and build your facility and install state-of-the-art equipment to provide the most cost effective dispensing and storage solutions.

Services for Biofuel and Alternative Fuels

Where experience counts

The Wayne Eco-fuel Ovation2® dispensers are specifically designed for ethanol blends and biodiesel providing retailers with the latest in fuel compatibility. The eco-fuel dispensers are compatible with petroleum for the ultimate in flexibility and choice. You can continue to dispense gasoline now and be prepared to offer alternative fuels in the future.

The dispensers are constructed to meet the unique requirements of eco-fuels such as biodiesel and E85 to ensure years of trouble-free performance.

Biofuel Blending and Storage Systems

Acterra provides turn-key services for biofuel blending and storage systems. These systems are either aboveground or underground storage systems. Underground storage systems are built on-site and allow for a smaller operational footprint. Aboveground systems are manufactured at our facilities and can be shipped to remote terminals for immediate use.

Typical systems for B100 consist of an insulated Fireguard or Flameshield tank along tank heating systems, meters, a load-out system, with a card reader option for fuel management. Packages are shipped pre-wired allowing for easy installation at various terminals. The Acterra biofuel team customizes systems up to 50,000 gallons to meet the individual needs of our customers.
