

# → Comdata® SmartSite Web Portal

distributed by: Acterra Group, Inc. 800.289.7371 www.acterragroup.com

↳ The SmartSite web portal is Comdata's revolutionary automated fuel management software specifically configured for hosted, offsite deployment. The portal utilizes a trailblazing technology approach to ensure that the configuration, deployment and management of your fuel systems are seamlessly integrated and continuously synchronized.

The SmartSite portal can be accessed online or installed and managed on your local office network. In either deployment scenario, a constant link between your Comdata SmartSite and the portal is maintained.

This unique feature removes the need for unnecessary investment in additional IT resources and infrastructure by providing easy access via an ultra-secure EV-SSL, intranet portal. You now have access to your fueling operation wherever an internet connection is available.

A feature distinct to the portal is the ability to build and manage your business from top to bottom. The platform supports multiple layers of user-defined access, cascading from the top level of the organization to sub-companies, each with multiple sub-users within every tier. Comdata SmartSite's simplicity and scalability make it ideal for enterprise-class jobbers and backyard fueling operations alike.

## SmartSite Web Portal Benefits
